Table IV.E-2

Birds Documented during the NYS 2000-2005 Second Breeding Bird Atlas (Block 5858A) and NYS Third Breeding Bird Atlas (West Point CW and West Point SW Blocks)

Common Name	Scientific Name	2000-2005	2020-2024
<p>Notes: Boldface indicates the subset of species that are not considered to have the potential to nest in the vicinity of the Shoreline Trail, on the basis of their habitat associations, area requirements, and sensitivity to human disturbance (Billerman et al. 2020).</p> <p>The NYS 2020-2024 BBA is ongoing. Available data are uploaded by volunteer citizen scientists and occasionally reviewed by eBird regional reviewers. Survey blocks are roughly 9 square miles and are a subset of the 7.5' United States Geological Survey (USGS) Topo Quad in which the survey block is located (the USGS Topo Quads are broken up into six smaller blocks). The survey blocks from the Third BBA do not correlate directly with the Second BBA survey blocks. As of April 4, 2024, the West Point CW Block and West Point SW Block and for the 2020-2024 BBA are considered "incomplete." Additional species may be included in the species log for all survey blocks as the 2020-2024 survey progresses. Only birds identified to species and with "confirmed", "probable", or "possible" breeding evidence are included in the table.</p> <p>Sources: NYSDEC 2000-2005 Second BBA.
